

ZAIN SYED

Toronto, ON

✉ me@eszain.me  [eszain](#)  [eszain](#)  [eszain.me](#)  [me-eszain](#)

Education

York University

Expected May 2027

Bachelor of Engineering (B.Eng) in Computer Engineering

Toronto, ON

- **Courses:** Advanced OOP (Java) | Computer Organization | Software Design | Data Structures
- Lassonde Entrance Scholarship (\$1000) | [Harvard University: CS50's Introduction to Computer Science](#)

Experience

[YU Blueprint – FixThe6ix](#)

January 2026 – Present

Project Lead (Engineering + Product Coordination)

Remote

- Managing a **9**-person cross-functional team (**6** developers, **3** designers) to deliver a responsive gift-card admin portal for FixThe6ix's ReGiftcard program, digitizing inventory for **50+** store brands and **100+** various dollar cards.
- Assigning **12+** GitHub tickets, prioritizing sprints, and approving **9+** PRs across **4+** major flows (dashboard, gift-card intake, inventory, donations), ensuring code quality, with structured branching and consistent commit practices.
- Designed and implemented bulk CSV import, duplicate-card detection, store/category filtering, and spend/donation logging, automating workflows and enabling real-time reporting for admins, reducing data entry time by over **60%**.
- Tech Stack: Next.js, React, Prisma, PostgreSQL, TypeScript, Zod, Recharts, Tailwind CSS, shadcn/ui, and Infisical

[MZA CPA Professional Corporation](#)

January 2026 – April 2026

Full Stack Developer Intern

Scarborough, ON

- Architected and deployed a client tax intake platform processing **500+** document uploads for **150+** clients, reducing filing turnaround time by **70%** through milestone-based filing workflows from intake to CRA submission.
- Streamlined tax filing operations for **150+** active clients by building a Supabase workflow model and Microsoft Graph email automations that synchronized admins and clients across **10+** algorithms from intake to CRA submission.
- Reduced payment processing friction by **85%** through dual-gateway Stripe and Interac integration with automated webhook verification, facilitating **\$1,100+** monthly transactions with real-time status updates for **150+** clients.
- Tech stack: Next.js, React, TypeScript, Clerk, Supabase, Cloudflare R2, Stripe, pdf-lib, Radix UI and Framer Motion

Projects

[Komo](#) | *Supabase, Next.js, Gemini API* | **3rd Place Winner @ HackWestern 2025**

2025

- Built AI-powered personal search aggregating two platforms Slack and Notion using Next.js and Gemini API.
- Processing real-time cross-platform **40+** queries with resilient backend validation and frontend integration.

[LookSmith](#) | *Python, GDScript, MediaPipe* | HackHarvard 2025

2025

- Engineered a real-time 3D modeling controller detecting **5+** facial gestures and mapping them to modeling tools.
- Built Python script tracking 3D model saves, for instant logging to Supabase and updating dashboard in **0.8s**.

[Beat The Clock Binary](#) | *Verilog, Quartus, DE-10 Lite* | FPGA Game Development

2024

- Developed two-player FPGA game with **5-bit** guessing, score tracking, and 7-segment display updates.
- Implemented edge detection and **1Hz** clock divider supporting **30+** gameplay cycles with precise timings.

Technical Skills

Languages: JavaScript, TypeScript, Java, Python, C#, C, C++, Ruby, HTML/CSS, SQL, Bash

Databases: PostgreSQL, MySQL, MongoDB, Supabase, Cloudflare R2

Frameworks: React.js, Next.js, Node.js, Express, Flask, Ruby on Rails, .NET, Stripe, Tailwind CSS

Cloud & DevOps: AWS ECS, AWS S3, Azure, Docker, Kubernetes, Git, GitHub

AI & MCP Tools: LangChain, Cursor, Claude Code, Vector DBs (Supabase)

Leadership / Extracurricular

[Code The Dream](#)

July 2025 – Present

Coding Mentor

Durham, NC (Remote)

- Mentoring **3** students weekly in Node.js, improving debugging and backend problem-solving across **10+** modules by reviewing code, explaining errors, and reinforcing best practices in Express, SQL, Prisma, auth, testing, and deploying.
- Achieved a **90%** completion rate for **4** students across **7+** React lessons as measured by submissions by providing targeted support on JSX, components, props, state, hooks, forms, routing, and data fetching during remote lab sessions.
- Improved assignment success rates by **35%+** for **5** Intro students as measured by fewer resubmissions across **15+** modules by reviewing HTML/CSS, Git, and JavaScript fundamentals in collaborative coding review sessions.
